

Digitizing Clinical Trial Protocols to Connect The Entire Clinical Trial Ecosystem

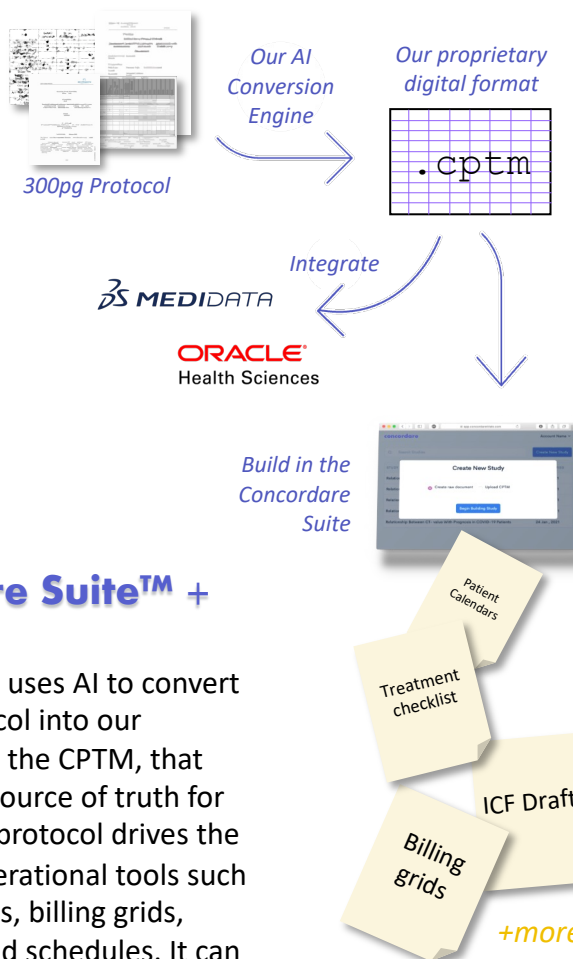

Concordare Trials transforms complex clinical protocols into a standardized digital format that integrates with existing systems and/or instantly generating operational tools/documents through our Concordare Suite

The Problem

Clinical trial protocols often exceed 300 pages and require extensive human interpretation. This results in a 20% increase in study startup timelines, delays of 6 to 8 weeks in site activation, and 13% of protocol deviations caused by misinterpretation and manual, error-prone processes.

The Concordare Suite™ + CPTM

The Concordare Suite, uses AI to convert any clinical trial protocol into our structured file format, the CPTM, that serves as the central source of truth for the study. This digital protocol drives the instant creation of operational tools such as treatment checklists, billing grids, consent templates, and schedules. It can also be integrated into other digital systems, enabling seamless and efficient trial execution with minimal input from site staff.

How our customers benefit:

6-8 weeks

saved during site activation

\$2-6M

in direct trial costs
\$25M–55M+ in accelerated revenue impact

73%

decrease in study errors and protocol misinterpretation

Sponsors and medical research organizations using Concordare:

**Ready to ditch the 300-page protocol?

Concordare Licensing Models

Concordare offers flexible ways for sponsors to digitize protocols, streamline site operations, and ensure study consistency

Protocol Conversion

Concordare Suite License

Template and Document Creation

1

\$

Conversion Only

*Pay for protocol conversion.
Connect to participating sites*

Sponsors seeking maximum value and adoption by sites and a lean entry into digital protocols

Sponsor covers cost of protocol conversion

Sites retain their own Suite licenses and recover cost as overhead charges

Sites create own custom tools/documents that are auto-populated by any/all digital protocols

2

\$\$\$

Conversion + Pre-Paid Site License

Pay for protocol conversion and pre-pay licenses for sites

Sponsors wanting a turnkey, low-complexity deployment across a defined set of sites

Sponsor covers cost of protocol conversion

Sites' license provisioned by sponsor

Sites create own custom tools/documents that are auto-populated by sponsor's digital protocols

3

\$\$

Conversion + Internal License

License the Suite internally

Sponsors who want to own the digital process internally and control how tools are shared.

Sponsor covers cost of protocol conversion

Sponsor retains single license to the suite

Sponsor builds/populated all internal documents and distributes to sites
